Operations recommended for the end of life treatment

There are several steps to process the products at the end of life so as to recover components, materials or energy :

Reuse ⇨ Depollution ⇨ Dismantling ⇨ Shredding

The components of the products that are recommended to be depolluted (according to the WEEE 2002/96/EC list) or that are recommended to be re-used or dismantled so as to improve the material recovery or that lead to some hazards are listed, identified and located hereunder.

This ATV312 contains electrolytic capacitors which may cause electrical shock during the end of life treatment process. BEFORE SERVICING, REMOVE ALL POWER, WAIT 15 MINUTES.

Types of Components	Number on drawing	Components description
Components listed for operating hazards	2	Electrolytic capacitors
Components listed for reuse	None	None
Components listed for depollution	1	Printed Circuit Board Assembly (PCBA)
	2	Electrolytic capacitors
Components listed for dismantling operation which improves the recycling performance	3	Plastic parts > PC FR <
	4	Aluminium (heatsink)
