Electric Vehicle Charger Pedestal Foundation

For Level 2 EV Charging Stations

CATALOG NUMBER: EBASE

Simplify installations

- Foundation is a direct-bury option that eliminates the need to wait for concrete to cure before installing the EV charger, condensing project timelines
- Contractors install the foundation, then whenever the site is ready for EV charging they simply mount any EV charging pedestal*
- Removable top plate enables easy maintenance, repairs, and replacements

Create EV-ready infrastructure

- For locations that have EV-ready or EV-capable building codes and requirements but are not quite ready for EV charging solutions, the foundation acts as a preventive measure against future infrastructure disruptions
- Contractors simply install the foundation and transition when desired by mounting an EV charging pedestal

Designed to withstand the elements

- Extensive testing to withstand frost heave, hydraulic lift, heavy traffic, and high winds (up to 150 mph), with no chemical leaching
- Manufactured from durable, weather-resistant polypropylene

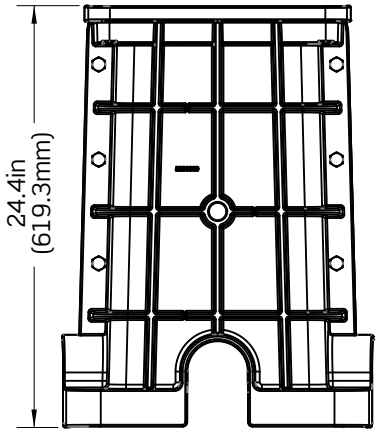

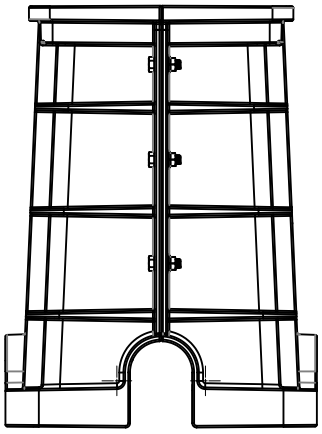

Country of Origin: USA
